

Find the clues to solve our

# Museum Mysteries

Welcome to the Natural History Museum! You'll begin the scavenger hunt from the main lobby, located on the fourth floor.

## Head into the Panorama on the fourth floor.

1. Look carefully in the tropical trees. How many monkeys can you find hiding in the treetops?

---

2. Which bird has a larger beak: the toucan or the macaw?

---

3. In the woodland scene, there are two very large birds on the ground. These birds are not shown on the exhibit label. Can you guess what they are?

---

---

4. In the desert area, there is a mountain lioness hiding with her babies. Do the babies look exactly like their mother? How are they different?

---

---

5. In the center of the Panorama, there is a large Kodiak bear on display. It is roped off so visitors won't touch it. Why is it so important not to touch the bear?

---

---

## Go downstairs to the third floor.

6. Find the exhibit of fluorescent minerals. With the ultraviolet light on, what color do you see the most?

---

7. There is an exhibit about turtles and tortoises. Why do you think these reptiles have such large shells?

---

---

## Make your way over to Bugtown.

8. Crawl through the underground tunnel. What do you see in the little windows?

---

---

---

9. How many spiny leaf and walking stick bugs can you find? Why are they so hard to find?

---

---

**Now go up to the sixth floor.**

10. You'll see a large beehive in the tree, with a tunnel that allows the bees to leave the building.  
Why do the bees need to leave?

---

---

11. Find our nation's bird. What is the name of this animal?

---

---

*Answers are available from the Information Desk in the fourth floor main lobby.*
